BNA | Nashville International Airport

Department of Human Resources

Invites applicants for the position of:

Network Administrator
Requisition: NETWO01344

_____

The **Network Administrator** for the Nashville International Airport's (BNA) network environment is responsible for maintaining and administering computer networks. Primary duties include maintenance of computer networks, hardware, software, and other related systems, performing disaster recovery operations, protecting data, software, and hardware from attacks. Works closely with network users in order to identify potential issues and fix existing problems.

Essential Job Responsibilities:

- Plans and implements network security Software Defined (SD)-Access policies.
- Formulates, defines and designs network project scope and objectives based on business needs and a thorough understanding of systems and requirements.
- Provides technical support of BNA's network environment by identifying network requirements, installing network components, maintaining upgrades and monitoring network performance.
- Diagnoses and resolves issues with wired and wireless networks, and virtual local area network (VLANS).
- Serves as lead for review of design and implementation network projects. Resolves technical and/or operational network issues.
- Responds to unplanned events that adversely affect the network or computing environment.
- Sets up router, switch and server hardware access for users.
- Produces and analyzes equipment performance records to determine the need for repair or replacement.
- Determines hardware or software requirements related to systems and network changes.
- Investigates, recommends and installs enhancements and operating procedures that optimize network availability.
- Maintains and updates local area network (LAN) and wide area network (WAN) documentation.

Minimum Qualifications:

- High School Diploma
- 4-7 years of relevant experience. Strong understanding of network infrastructure and network hardware. Experience implementing, administering, and troubleshooting network devices, including WAPs, routers, switches, and controllers. Deep knowledge of application transport, network infrastructure protocols, and experience with Cisco Software Defined (SD) - Access is highly desired.

Accepting applications until filled
