

Here is a description of the electrical helper position I am currently looking for:

Company is an electrical services firm that specializes in providing energy efficient lighting solutions to customers. Most of their projects are LED lighting installations and/or upgrades.

Majority of clients are government owned facilities like schools, universities, hospitals, mental institutions, prisons, and some industrial plants.

Company has several locations but this opening is for the Nashville crew which is a traveling team. The team is made up of a field supervisor, a couple lead electricians, and electrical technicians I, II, and III. This crew will rarely actually go into the Nashville office. They travel around (mostly regional travel - Nashville, Memphis, Alabama, Arkansas, Kentucky, and Florida).

The projects are typically 4-12 weeks long and the team travels together in company vehicles to the hotels and to the job site from the hotel every morning.

When on a project, the Electrical Technicians are partnered with an Electrician/Team Lead/ or Supervisor and assist with installing the upgrading the LED lighting. The technician role can be very monotonous because it is a lot of screwing in light bulbs. Need to be okay with climbing on ladders. Their current project is in Nashville, and they expect the project to conclude mid-October.

If interested, please have candidates email resume to rbruneel@aerotek.com or call Scott Bruneel at (865)292-2432
